BUILDING A HEALTHY MEAL

3 STEPS TO BUILDING A NUTRIENT DENSE MEAL

Building a healthy meal does not have to be complicated. The following three steps can be taken to ensure that you have a healthy plate.

step 1

Start by choosing a healthy protein source such as chicken, lean mince, beans, and lentils. Try to fill $\frac{1}{4}$ of your plate with the protein source.

step 2

Next, try to fill at least half your plate with different coloured vegetables. Aim to have a variety of vegetables each day.

step 3

Fill the remained of your plate with whole grains such as brown rice, brown bread, brown pasta, potatoes, sweet potatoes, corn or maize meal.

TIPS FOR HEALTHY EATING AS A STUDENT

ALWAYS HAVE A PLAN

Always have a rough idea of what you want at the shop before going. We have attached meal planning templates to make that easier.

SHOP IN SEASON

These foods are usually cheaper than foods that are out of season.

PREP LIKE A PRO

Meal prepping doesn't mean to cook ALL your food for the following week. It can be simple things such as cooking some extra chicken and veggies for the week or for the days where loadshedding gets the best of you.

HEALTHY DOESNT MEAN BORING

This recipe book will ensure that both your taste buds and your body stays healthy.

EAT THE RAINBOW

Fill your plate with a variety of colours. This will ensure that you get all the nutrients you need every day.

BUDDY UP!

Buying foods in larger amounts often work out to be more affordable in the long run. Buying in bulk, and splitting with a friend will allow you to get the same amount of food for cheaper.

SIMPLE SWAPS

We all have to start somewhere. Try not to cut out all unhealthy foods at once, but to rather incorporate healthy habits into your life one at a time.

SAFE FOOD STORAGE:

Store your raw meats below cooked products

Don't store foods too long and always check "best before" dates.

Always refrigerate cooked foods and perishable foods.

Your fridge temperature should always be 4°C

Your freezer temperature should always be -18°C

Store foods in containers to avoid contact between raw and prepared foods

Decant canned foods once opened into a container before storing it in the fridge

SAFE FOOD HANDLING:

Always wash your hands with soap and warm water before and after food preparation.

Be sure to wipe down all surfaces when handling food.

Wash all fruits and vegetables before consumption.

Cook food thoroughly, especially chicken, pork and seafood.

Wash your hands after using the toilet or working with raw food.

Separate raw chicken, meat and seafood from other foods.

1. In a skillet, heat the oil and add the chopped onions.
2. Sauté the onions on low to medium heat until soft.
3. In a separate bowl, mix together the plain yoghurt, mayonnaise, chutney, curry powder, salt, pepper, and sugar.
4. Add the whole chicken breasts to the pan with 45ml of hot water and cook for 10 – 15 minutes.
5. Shred the chicken in the pan using two forks. If you have a non-stick pan, remove the chicken and shred it in a separate bowl before adding it back into the pan to avoid damaging the pan.
6. Add the yoghurt mixture to the pan, cover and simmer for another 5 – 10 minutes, while stirring every minute.
7. Serve with your choice of pasta, cooked according to packet instructions.
